

Sprinkler Innovation At Its Prime

Prime Lawn sets a new standard in "smart" irrigation with the most advanced, water-efficient sprinkler technology available.

Revolutionary Rotor Technology

Our advanced wind-resistant, multi-stream rotor easily integrates with any conventional spray head body or shrub adapter for significant benefits over existing solutions:

- improved water conservation and erosion control
- decreased precipitation rate
- unmatched uniformity
- outstanding close-in watering
- decreased surface runoff
- increased soak time

An Efficient, Cost-Effective Sprinkler Solution

This technology adheres to the green standards and is much more cost-effective than systems using conventional spray heads or single-stream rotors. Further, this watering technology is simplified with matched water rates – adjustable arc and radius, covering eight to thirty feet. You will not have to deal with the hassle of changing the sprinkler nozzle nor stubborn tree roots encroaching upon the sprinkler lines. It's sprinkler innovation at its Prime.
